The follow-on to Apple Training Series: Mac OS X Deployment v10.6 and Apple Training Series: Mac OS X Directory Services v10.6, this volume takes an in-depth look at the many options provided to administrators to secure access to intranet services. System administrators and other IT professionals will learn how to configure Mac OS X Server v10.6 to provide secure access to vital network services such as web, mail, and calendar from mobile devices such as the iPhone. The Providing Network Services section covers establishing critical network services such as DNS, DHCP, and NAT/Gateway services. Systems & Services focuses on connecting private and public networks securely using firewalls, certificates and VPNs. Finally, the Working with Mobile Devices section teaches students how to successfully configure Snow Leopard Server's Mobile Access Server and securely deploy intranet services such as web, mail, and calendar services to mobile devices, such as the iPhone, without the need for VPN services.

Sharing Apple Apps With Your Team, Testers & the World You'll learn how to sign up for Apple Developer Program, generate the various certificates needed, configure your app and submit an app to the App Store for approval, both manually and through automated processes through automated pipelines. You'll learn how to use Apple TestFlight to add internal and external testers and receive feedback and crash reports. iOS App Distribution starts with explaining hurdles everyone faces, such as code signing, provisioning profiles, and how to do manual releases. It'll then go into more advanced topics, including distribution through TestFlight, build customization, automation, and continuous integration. Who This Book Is For This book is for beginner to experienced developers who want to know the best and most common workflow to release an app to the App store, as well as limiting frustration by troubleshooting and debugging common issues and problems associated with distributing apps. Topics Covered in iOS App Distribution & Best Practices App Store quick start: Your quickest way from no account to the App Store. Provisioning, code signing & entitlements: In-depth explanation of what they are, why you need them, and how they work. Distribution channels & TestFlight: Learn different ways of distributing your app, within an enterprise, with internal or external testers. App Store Connect: Learn about the Apple review process, what are the guidelines, what can go wrong and how to dispute them. Build customizations: Learn the ins and outs of configuring Xcode and build configurations. Build automation: Automate builds, build servers, and learn about tools such as fastlane. Continuous integration: Build your own CI pipeline to code, build, test, release, and repeat! After reading this book, you'll take your app build process and distribution to the next level, automate most of its tedious processes, and have an easier time debugging obscure app submission problem

This book is a breakthrough for beginners and intermediates of enterprise mobility. Scholars, executives, and experts can major scale and scope of enterprise mobility for a thirst of knowledge. This book is an independent view on enterprise mobility, which is beneficiary to business heads, technical architects, project managers, analysts, system administrators, project leads, and developers for enterprise mobility, design, development, support, and maintenance. The book has been classified in seven sections. Section one introduces enterprise mobility with definition, objective, focus areas, needs, and challenges of enterprises. Section two details enterprise mobility ecosystem, landscape, and maturity model. Enterprise mobility is surrounded with technical acronyms and terminologies (EMM, EAS, MAM, MDM, MCM, and MEM). Section three provides concept and detail of EMM.

Section four emphasizes on technology. This section describes leading mobile platforms, form factors, and type of mobile applications. Section five traverses through enterprise mobile application information flow, architecture, layered structure, and other components. It inspects popular and important architecture ingredients (Push Notification, SSO, mBaas, SOA, and MEAP). Section six shares mobility trends like mobile first, gamification, IOT, and hybrid. Last section seven is a case study for enterprise mobile solution. Finally, appendix section supplements RIX: Best Practices for enterprise mobility pathway.

Charles Edge, Zack Smith, and Beau Hunter provide detailed explanations of the technology required for large-scale Mac OS X deployments and show you how to integrate it with other operating systems and applications. Enterprise Mac Administrator's Guide addresses the growing size and spread of Mac OS X deployments in corporations and institutions worldwide. In some cases, this is due to the growth of traditional Mac environments, but for the most part it has to do with "switcher" campaigns, where Windows and/or Linux environments are migrating to Mac OS X. However, there is a steep culture shock with these types of migrations. The products that are used are different, the nomenclature is different, and most importantly the best practices for dealing with the operating system are different. Apple provides a number of tools to help automate and guide IT toward managing a large number of Mac OS X computers—it has since before Mac OS X was initially released. However, if you want to put together all of the pieces to tell a compelling story about how to run an IT department or a deployment of Macs, you need to compile information from a number of different sources. This book will provide explanations of the technology required. Provides complete solutions for the large- and medium-scale integration of directory services, imaging, and security Complete guide for integrating Macs and Mac OS X into mixed environments with confidence and no down time One-stop volume for IT professionals who need the technical details to get their job done as efficiently and effectively as possible

This book constitutes the refereed proceedings of the SIGSAND/PLAIS EuroSymposium 2015 titled Information Systems: Development, Applications, Education, held in Gdansk, Poland, in September 25. The objective of this symposium is to promote and develop high-quality research on all issues related to systems analysis and design (SAND). It provides a forum for SAND researchers and practitioners in Europe and beyond to interact, collaborate, and develop their field. The 11 papers presented in this volume were carefully reviewed and selected from 28 submissions. They are organized in topical sections on information systems development; business process modeling; and information systems education.

Ready to build mobile apps that out-perform the rest? If you're an iOS developer with app-building experience, this practical guide provides tips and best practices to help you solve many common performance issues. You'll learn how to design and optimize iOS apps that deliver a smooth experience even when the network is poor and memory is low. Today's picky users want fast and responsive apps that don't hog resources. In this book, author Gaurav Vaish demonstrates methods for writing optimal code from an engineering perspective, using reusable Objective-C code that you can use right away. Up your game and create high-performance native iOS apps that truly stand out from the crowd. Measure key performance indicators—attributes that constitute and affect app performance Write efficient apps by minimizing memory and power consumption, and explore options for using available CPU cores Optimize your app's lifecycle and UI, as well as its networking, data sharing, and security features Learn about application testing, debugging and analysis tools, and monitoring your app in the wild Collect data from real users to analyze app usage, identify bottlenecks, and provide fixes Use iOS 9 upgrades to improve your app's performance
