Data warehouse refers to
the process of compiling
and organizing data into
one common database,
whereas data mining
refers to the process of

Read PDF Data Warehousing

extracting useful data from the databases. The data mining process depends on the data compiled in the data warehousing phase to recognize meaningful patterns. A data warehousing is created to support management systems.

Data Mining vs Data
Warehousing -

Read PDF Data Warehousing

Javatpoint

Data warehousing is the process of pooling all relevant data together, whereas Data mining is the process of analyzing unknown patterns of data. Data warehouses usually store many months or years of data. This is to support historical analysis. Data mining is the use of pattern recognition logic
