The Reenlistment, Extension, Reclassification, and Reserve Component Transition System (RETAIN) is the Army's computerized retention system for enlisted personnel. It contains all the reenlistment data required to document the retention of Army Service members, including tracking selective reenlistment bonuses (SRBs) paid and data required to transition active Army Service members to the Army National Guard and U.S. Army Reserves. DFAS and the Army activated an adjustment to the SRB portion of the interface between RETAIN and the Defense Joint Military Pay System (DJMS) in April 2007. This interface reduced the requirement for reenlistment data to be manually fed from RETAIN into the DJMS. RETAIN provides the Army Human Resources Command (HRC) Enlisted Personnel Management Directorate with a list of both processed SRBs and those rejected for career counselors to review and correct. An SRB is paid to encourage Army Service members to reenlist in critical military occupational skills to ensure adequate retention levels. The purpose of the audit was to determine whether internal controls were in place and effective for payments to Army Service members for reenlistment bonuses. Funding was not made available to maintain the DJMS to allow the Army to pay the amount due to Service members for SRBs. As a result, 1,336 SRBs worth \$15.6 million were not paid as of August 31, 2007. The authors recommend that DFAS improve the DJMS so that it will pay Army Service members the amount owed, and that the Army HRC develop internal controls to include posting the information concerning SRB payments to the bonus report in the RETAIN system for Army career counselor access. They identified DFAS management control weaknesses related to the processing of Army reenlistment bonuses. Although those weaknesses were not material in relation to the Army reenlistment bonus program taken as a whole, the weaknesses should be resolved because reenlistment bonuses affect Army Service members' pay.

In light of the recent mobilizations associated with the war on terrorism and homeland security, GAO was asked to determine if controls used to pay mobilized Army Guard personnel provided assurance that such pays were accurate and timely. GAO's audit used a case study approach to focus on controls over three key areas: processes, people (human capital), and systems. The existing processes and controls used to provide pay and allowances to mobilized Army Guard personnel are so cumbersome and complex that neither DOD nor, more importantly, the mobilized Army Guard soldiers could be reasonably assured of timely and accurate payroll payments. Weaknesses in these processes and controls resulted in over- and underpayments and late active duty payments and, in some cases, largely erroneous debt assessments to mobilized Army Guard personnel. The end result of these pay problems is to severely constrain DOD's ability to provide active duty pay to these personnel, many of whom were risking their lives in combat in Iraq and Afghanistan. In addition, these pay problems have had a profound financial impact on individual soldiers and their families. For example, many soldiers and their families were required to spend considerable time, sometimes while the soldiers were deployed in remote, combat environments overseas, seeking corrections to active duty pays and allowances. The pay process, involving potentially hundreds of DOD, Army, and Army Guard organizations and thousands of personnel, was not well understood or consistently applied with respect to determining (1) the actions required to make timely, accurate pays to mobilized soldiers, and (2) the organization responsible for taking the required actions. With respect to human capital, we found weaknesses including (1) insufficient resources allocated to pay processing, (2) inadequate training related to existing policies and procedures, and (3) poor customer service. Several systems issues were also a significant factor impeding accurate and timely payroll payments to mobilized Army Guard soldiers, including (1) non-integrated systems, (2) limitations in system processing capabilities, and (3) ineffective system edits.

In light of the GAO Nov. 2003 report highlighting significant pay problems experienced by Army Nat. Guard soldiers mobilized to active duty in support of the global war on terrorism & homeland security, GAO was asked to determine if controls used to pay mobilized Army Reserve soldiers provided assurance that such payments are accurate & timely. This audit used a case study approach to focus on controls over three key areas: processes, people (human capital), & automated systems. Includes testy. before the House Comm. on Gov't. Reform, Subcomm. on Gov't. Efficiency & Financial Mgmt., U.S. House of Rep., by Gregory Kutz, & Geoffrey Frank, Financial Mgmt. & Assurance, GAO; & John Ryan, Office of Special Investigations, GAO.
