Academic Paper from the year 2021 in the subject Pedagogy - The Teacher, Educational Leadership, grade: 1.00, University of Reading (Institute of Education), language: English, abstract: This paper explores the reasons for the teachers' reluctance to engage in the collaborative tasks, and also the implications this has for collaboration as a tool for professional development. There is increased

attention on Continuing Professional Development of teachers for the purpose of improving the quality of teachers' practices and improving pupils' learning experiences and achievement and overall quality of education. One important aspect of teachers' CPD that is championed is 'collaboration'. CPD through collaboration can be considered as an intensive interaction that engages educators in opening up their beliefs and practices to investigation and debate. Collaborative CPD can cover a number of activities ranging from working together with colleagues in informal, unplanned ways to structured, more formalized communities of inquiry or learning communities. Among the potential benefits of

Collaborative CPD are sharing knowledge, understanding and experiences and enhancing reflective practices to support professional development. One point is clear that teachers' willingness to actively engage in or to collaborate for the purpose of their professional development is crucial for collaborative CPD. While there are several benefits that come with collaborative CPD, some teachers in the Zambian context are reluctant to collaborate. Why would teachers be reluctant to collaborate?

algorithms has rarely been directly accessible to practitioners, researchers, or students. An Introduction to the Analysis of Algorithms, Second Edition, organizes and presents that knowledge, fully introducing primary techniques and results in the field. Robert Sedgewick and the late Philippe Flajolet have drawn from both classical mathematics and computer science, integrating discrete mathematics, elementary real analysis, combinatorics, algorithms, and data structures. They emphasize the mathematics needed to support scientific studies that can serve as the basis for predicting algorithm performance and for comparing different algorithms on the basis of performance. Techniques covered in

the first half of the book include recurrences, generating functions, asymptotics, and analytic combinatorics. Structures studied in the second half of the book include permutations, trees, strings, tries, and mappings. Numerous examples are included throughout to illustrate applications to the analysis of algorithms that are playing a critical role in the evolution of our modern computational infrastructure. Improvements and additions in this new edition include Upgraded figures and code An all-new chapter introducing analytic combinatorics Simplified derivations via analytic combinatorics throughout The book's thorough, self-contained coverage will help readers appreciate the field's challenges, prepare

Problems in Function Theory', a list of 141 problems in seven areas of function theory. In the decades following, this list was extended to include two additional areas of complex analysis, updates on progress in solving existing problems, and over 520 research problems from mathematicians worldwide. It became known as 'Hayman's List'. This Fiftieth Anniversary Edition contains the complete 'Hayman's List' for the first time in book form, along with 31 new problems by leading international mathematicians. This list has directed complex analysis research for the last half-century, and the new edition will help guide future research in the subject. The book contains up-to-date information on each problem,

For physics students interested in the mathematics they use, and for math students interested in seeing how some of the ideas of their discipline find realization in an applied setting. The presentation strikes a balance between formalism and application, between abstract and concrete. The interconnections among the various topics are clarified both by the use
