GRIHA the national rating system of India is an evaluation tool for measuring and rating abuilding's environmental performance. This set of 5 GRIHA manuals have been developed asa guide for building professionals (architects, services engineers, landscape designers, projectmanagers, contractors, etc.) who are involved in the design and construction of green buildings,to provide them a comprehensive understanding of the GRIHA rating system. The informationprovided in these manuals will serve as a complete guide for individuals who are interested inknowing about this rating system, its underlying criteria, rating process, strategies that shouldbe adopted for complying with all the criteria and the documentation preparation and evaluationprocedure.

This title was first published in 2000. A discussion of information technology (IT) in developing countries. The contributors can be considered to share the following set of broad premises: information and communication technologies, and related systems, have significant potential to aid the economic growth and improvement of social conditions in the developing world; however, such potential is not released by simply transferring technologies and processes from advanced economies; in order to better serve development needs, people involved with the design, implementation and management of IT-related projects and systems in developing countries must improve their capacity to address the specific contextual characteristics of the organization, sector, country or region within which their work is located. The text thus emphasizes the importance of context in examining the role and value of IT in the developing countries. It focuses attention on the fusion of the activities of "professionals" (technical experts, managers, policy makers) and "users" (more broadly, all other groups affecting or affected by the technologies and systems), with the intention of facilitating locally meaningful and effective change.

Waste Biorefinery: Integrating Biorefineries for Waste Valorisation provides the various options available for several renewable waste streams. The book includes scientific and technical information pertaining to the most advanced and innovative processing technologies used for the conversion of biogenic waste to biofuels, energy products and biochemicals. In addition, the book reports on recent developments and new achievements in the field of biochemical and thermo-chemical methods and the necessities and potential generated by different kinds of biomass in presumably more decentralized biorefineries. The book presents an assortment of case-studies from developing and developed countries pertaining to the use of sustainable technologies for energy recovery from different waste matrices. Advantages and limitations of different technologies are also discussed by considering the local energy demands, government policies, environmental impacts, and education in bioenergy. Provides information on the most advanced and innovative processes for biomass conversion Covers information on biochemical and thermo-chemical processes and products development on the principles of biorefinery Includes information on the integration of processes and technologies for the production of biofuels, energy products and biochemicals Demonstrates the application of various processes with proven case studies

Innovation transforms companies and markets. It's the key to solving vexing social problems. And it makes or breaks professional careers. But for all the enthusiasm the topic inspires, the practice of innovation - how to do it-has remained stubbornly impenetrable. No longer. In The Little Black Book of Innovation, leading thinker Scott D. Anthony draws from research, Innosight fieldwork with global giants such as Procter & Gamble, and personal experience launching and investing in start-up companies to demystify the discipline of innovation. With wit and remarkable insight born of years of both leading and teaching innovation, Anthony presents a simple definition of the concept, breaks down the essential differences between its various types, and illuminates its vital role in organizational success and personal growth.

Treatment Marshes for Runoff and Polishing represents the most comprehensive and up-date-date resource for the design, construction, and operation of marsh treatment systems. This new edition represents a complete rewrite of the surface flow sections of previous editions of Treatment Wetlands. It is based on the performance hundreds of treatment marshes over the past 40 years. Treatment Marshes focuses on urban and agricultural runoff, river and lake water improvement, and highly treated municipal effluents. New information from the past dozen years is used to improve data interpretation and design concepts. Topics included in this book are Diversity of marsh vegetation Analyses of the human use of treatment marshes New concepts of underground processes and functions Spectrum of marsh values spanning mitigation, restoration, enhancement, and water quality improvement Improved methods for calculation of evapotranspiration and wetland water temperatures Hydraulics of surface and subsurface flows in marshes Analysis of long track records for deterministic and probabilistic behavior Consideration of integrated microbial and vegetative contaminant removals via mass balances Uptake and emission of gases Performance of urban and agricultural wetlands Design procedures for urban and agricultural wetlands Reduction of trace metals, pesticides, pharmaceuticals, endocrine disruptors, and trace organics Updated capital and O&M economics, and valuation of ancillary benefits An updated list of over 1900 references

The wildly popular YouTube star behind Clean My Space presents the breakthrough solution to cleaning better with less effort Melissa Maker is beloved by fans all over the world for her completely re-engineered approach to cleaning. As the dynamic new authority on home and living, Melissa knows that to invest any of our precious time in cleaning, we need to see big, long-lasting results. So, she developed her method to help us get the most out of our effort and keep our homes fresh and welcoming every day. In her long-awaited debut book, she shares her revolutionary 3-step solution: • Identify the most important areas (MIAs) in your home that need attention • Select the proper products, tools, and techniques (PTT) for the job • Implement these new cleaning routines so that they stick Clean My Space takes the chore out of cleaning with Melissa's incredible tips and cleaning hacks (the power of pretreating!) her lightning fast 5-10 minute "express clean" routines for every room when time is tightest, and her techniques for cleaning even the most daunting places and spaces. And a big bonus: Melissa gives guidance on the best non-toxic, eco-conscious cleaning products and offers natural cleaning solution recipes you can make at home using essential oils to soothe and refresh. With Melissa's simple groundbreaking method you can truly live in a cleaner, more cheerful, and calming home all the time.
