A fascinating look at one of Scotland's most interesting bus operators, combined with some fascinating pictures.

Peter Murphy explores the world of British ambulances.

This book constitutes the refereed proceedings of Industry Oriented Conferences held at IFIP 20th World Computer Congress in September 2008. The IFIP series publishes state-of-the-art results in the sciences and technologies of information and communication. The scope of the series includes: foundations of computer science; software theory and practice; education; computer applications in technology; communication systems; systems modeling and optimization; information systems; computers and society; computer systems technology; security and protection in information processing systems; artificial intelligence; and human-computer interaction. Proceedings and post-proceedings of refereed international conferences in computer science and interdisciplinary fields are featured. These results often precede journal publication and represent the most current research. The principal aim of the IFIP series is to encourage education and the dissemination and exchange of information about all aspects of computing.

In 1979, fresh from its general election victory, the Conservative government began formulating plans to deregulate bus services and privatise the companies operating them in England, Scotland and Wales. London was not to be excluded, so from the outset, London Buses was broken up into several areas and from 1985, a tendering system was introduced which permitted other operators to bid for the routes. Opposition from the Labour group at the Greater London Council had to be dealt with – eventually achieved by abolishing it in 1986. However, as each subsequent year passed, promises that deregulation was coming were not met. In late 1992, the privatisation timetable was set, and was ultimately completed at the end of 1994. The issue of deregulation never resurfaced. Copiously illustrated with over 270 photographs, virtually all of which are being published for the first time, this is the story of London Buses over those sixteen tumultuous years. To give greater context to the narrative, annual vehicle acquisition listings show how purchasing policy changed over the period; important route changes, tendering gains and losses and a fleet list for the entire period are also included.

This contributed volume brings together research papers presented at the 4th International Conference on Dynamics in Logistics, held in Bremen, Germany in February 2014. The conference focused on the identification, analysis and description of the dynamics of logistics processes and networks. Topics covered range from the modeling and planning of processes, to innovative methods like autonomous control and knowledge management, to the latest technologies provided by radio frequency identification, mobile communication, and networking. The growing dynamic poses wholly new challenges: logistics processes and networks must be(come) able to rapidly and flexibly adapt to constantly changing conditions. The book primarily addresses the needs of researchers and practitioners from the field of logistics, but will also be beneficial for graduate students.

Showcasing rare and previously unpublished images documenting the years 1979 to 1993 in Preston's bus scene.
