Music, Language, and the Brain by Aniruddh D. Patel

Since Plato's time, the relationship between music and language has attracted interest and debate from a wide range of thinkers. Recently, scientific research on this topic has been growing rapidly, as scholars from diverse disciplines, including linguistics, cognitive science, music cognition, and neuroscience are drawn to the music-language interface as one way to explore the extent to which different mental abilities are processed by separate brain mechanisms.

Language And The Brain

Playing music or speaking two languages are challenging experiences and complex tasks for our brains. Past research has shown that learning to play music or speak a second language can improve brain function, but it is not known exactly how this happens.

Music, Language, and the Brain: Are You Experienced ...

One brain system, based in the temporal lobes, helps humans memorize information in both language and music— for example, words and meanings in language and familiar melodies in music.

Music And Language Are Processed By The Same Brain

Language And The Brain

Systems ...D Patel

According to studies, the specific part of the brain that is responsible for language skills is “closely connected” to the part of the brain that is focused on music comprehension. With music, these prompts and verbal cues can be easily distinguished.

How Music Helps Language Development | Teacher Finder

Language processing is a function more of the left side of the brain than the right side, particularly Broca's area and Wernicke's area, though the roles played by the two sides of the brain in processing different aspects of language are still unclear. Music is also processed by both the left and the right sides of the brain.

Neuroscience of music - Wikipedia

Music Boosts Brain Chemicals
One of the ways music affects mood is by stimulating the formation of certain brain chemicals. Listening to music increases the neurotransmitter dopamine. Dopamine is the brain's "motivation molecule" and an integral part of the pleasure-reward system.
