In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions – especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

School-aged children in the U.S. and other Western nations spend almost half of their waking hours in leisure activities. For some, out-of-school time is perceived as inconsequential or even counterproductive to the health and well-being of young persons. Recently, however, there has been a growing recognition that –along with family, peers, and school--the organized activities in which some youth participate during these hours are important contexts of emotional, social, and civic development. They provide opportunities for young persons to learn and develop competencies that are largely neglected by schools. At the same time, communities and national governments are now channeling considerable resources into creating organized activities for young people's out-of-school time. This volume brings together a multidisciplinary, international group of experts to provide conceptual, empirical, and policy-relevant advances in research on children's and adolescents' participation in the developmental contexts represented by extracurricular activities, and after-school and community programs. Organized Activities as Contexts of Development provides a handbook-like coverage of research in this new emerging field. It considers a broad developmental time-span from middle childhood through early adulthood, providing information on how motivation, participation, and developmental experiences change as youth get older. The contents cover one of the most salient topics in child and adolescent research, education, and social policy, placing consistent emphasis on developmental aspects and implications of organized activity participation for young persons. Representing contributors from several fields of study—psychology, criminal justice, leisure science, sociology, human development, education, prevention, and public policy--the book is designed to appeal to students and scholars in all these areas. Additionally, the volume is written to be of interest to professionals who administer programs and develop policy on youth.

This book is designed as a comprehensive educational resource not only for basketball medical caregivers and scientists but for all basketball personnel. Written by a multidisciplinary team of leading experts in their fields, it provides information and guidance on injury prevention, injury management, and rehabilitation for physicians, physical therapists, athletic trainers, rehabilitation specialists, conditioning trainers, and coaches. All commonly encountered injuries and a variety of situations and scenarios specific to basketball are covered with the aid of more than 200 color photos and illustrations. Basketball Sports Medicine and Science is published in collaboration with ESSKA and will represent a superb, comprehensive educational resource. It is further hoped that the book will serve as a link between the different disciplines and modalities involved in basketball care, creating a common language and improving communication within the team staff and environment.

Sport officials are tasked with maintaining order and adjudicating sport contests. Given their multifaceted role in enforcing rules, standardizing competitions, and keeping sport safe for all participants, they are a requisite part of the sport workforce. With ongoing reports of annual attrition rates in officiating in excess of 20-35% for various sports around the world, there is more than ample evidence that officiating dropout is a persistent, pervasive, and global challenge underpinned by multiple contributing factors including, but not limited to, the threat of verbal and physical abuse. Moreover, despite worldwide recognition and growing interest in the problem, there has not been a comprehensive resource for sport scientists and practitioners studying or working to reverse the ongoing trend. Sport Officiating: Recruitment, Development, and Retention provides a " state of the science " summary in the emerging area of inquiry limited to sport officiating recruitment, development, and retention, and, provides insight and evidence-based approaches to the development of successful officiating development programs (ODP). This book is a primary reference work using a multifaceted, holistic, and evidence-based approach to integrate key findings from the sport science literature to date in suggesting and providing real-world solutions to the practical issues faced by sport organizers. Sport Officiating: Recruitment, Development, and Retention is a key resource for researchers interested in the development of sport officials and for sport practitioners aiming to implement officiating development programs (ODP) at any level within sport systems.
