Raindrop size distributions are presented in a tabular form for 3135 samples of one cubic meter each. These were obtained from a drop camera at Island Beach, New Jersey during the period of October 30, 1960 through May 24, 1962. For each of the samples, certain parameters calculated from the distribution are reported. These include rainfall rate, radar reflectivity, liquid water content, attenuation cross-section, median volume diameter, and the total number of drops. Average distributions for various rainfall rates and radar reflectivities are also reported. (Author).

The Internet with its widening global dimensions has exposed the corporate world to the grave threat of espionage and cyber crimes; however, the organizations are invariably oblivious to these threats. The Ethical Hacking Guide to Corporate Security dismisses this incompetent approach. The book has addressed some of the horrific cyber crime cases to hit the corporate world, across 17 different countries in 5 continents. Direct correlation has been drawn between computer security and business profitability through an appropriate mix of technical explanation and business implication. This is a thoroughly researched book that provides easy-to-understand analyses of some of the most dangerous security threats and measures to safeguard networks.
