Best-practice statements (BPSs) aim to guide the practice of nurses, midwives, health professionals and support staff. They have been described as protocols that give practitioners guidance on the best and most comprehensive care, and as something to which practitioners should aspire (Cayless and Wengström, 2008).

Written for nursing students, nurse leaders, and practitioners at all levels, including those in specialty roles

Practice Nurses play an important and pivotal role in healthcare providing a range of interventions and services to patients in General Practice and Primary Care settings. While most Practice Nurses work in GP surgeries and doctor led clinics, others are working as autonomous practitioners in community practices and nurse led centres. Practice Nurses are presented with an ever increasing range of conditions and patient needs as the

File Type PDF Nurse Best Practice Guidelines

role is constantly changing and evolving. The extended roles and range of clinical skills which may be provided by a Practice Nurse depend on the needs of the patient and the qualifications, skills, competencies and scope of practice of each individual Practice Nurse (NMBI, 2015). Practice Nurses have a responsibility to ensure that they are suitably qualified, skilled and competent in carrying out each clinical procedure and intervention that they undertake. Developing guidelines for clinical practice is an important part of the Practice Nurse role, but the task of researching, developing and producing guidelines is time-consuming, and it can be difficult to find the information required as

and when needed. Practice Nursing: Clinical Guidelines and Procedures in Practice written by a Practice Nurse, and based on local and national guidelines, provides a comprehensive overview and a step by step guide for nurses carrying out a wide range of clinical procedures in practice. The book contains over 100 clinical guidelines and procedures with illustrations, tables, charts and diagrams. In producing these clinical guidelines, the author hopes that this book will prove useful as a resource and reference guide for other nurses in general practice and primary care settings.

Edition is an accessible and practical reference designed to help nurses and students with daily clinical decision making. Written in collaboration with certified nurse midwives, clinical nurse specialists, nurse practitioners, nutritionists, pharmacists, and physicians, it fosters a team approach to health care. Divided into four areas—Pediatrics, Gynecology, Obstetrics, and, Adult General Medicine—and following a lifespan approach, it utilizes the S-O-A-P (Subjective-Objective-Assessment-Plan) format. Additionally, the authors explore complex chronic disease management, health promotion across the lifespan, and professional and legal issues such as reimbursement, billing, and the

legal scope of practice. The Third Edition has a keen focus on gerontology to accommodate the AGNP specialty and to better assist the student or clinician in caring for the aging population. The authors follow the across the life span approach and focus on common complete disorders. Certain chapters have been revised and new chapters have been added which include: Health Maintenance for Older Adults; Frailty; Common Gerontology Syndromes; Cancer Survivorship; Lipid Disorders; Acne (pediatrics section). Please note that the 2016 CDC Guidelines for prescribing opioids for chronic pain in the United States were not yet available at the time the authors were updating the Third Edition.
