In this topic, we will see an application of Newton ' s Second Law in 5 selected cases of Elevator movement, which will help us to solve elevator problems in Physics with ease. From Newton ' s Second Law we can derive the equation of Force. If  $F$  is the net force applied on an object of mass  $m$  and the mass moves with an acceleration  $a$  then the equation goes like this,  $F = m a$ .

Solution : (a) the elevator is at rest. The elevator is at rest so there is no acceleration ( $a = 0$ ) We choose the upward direction in the positive direction and the downward direction in the negative direction.  $F = m$   
a.  $N - w = 0$  .  $N = w$  .  $N = 500$  Newton (b) the elevator is moving downward at a constant velocity. Constant velocity so there is no acceleration ( $a = 0$ )

The solutions to each part of the example illustrate how to apply specific problem-solving steps. In this case, we do not need to use all of the steps. We simply identify the physical principles, and thus the knowns and unknowns; apply Newton's second law; and check to see whether the answer is reasonable.
