majors, especially those who intend to teach. The text began as a set of lecture notes for the discrete mathematics course at the University of Northern Colorado. This course serves both as an introduction to

topics in discrete math and as the "introduction to proof" course for math majors. The course is usually taught with a large amount of student inquiry, and this text is written to help facilitate this. Four

main topics are covered:
counting, sequences, logic,
and graph theory. Along the
way proofs are introduced,
including proofs by
contradiction, proofs by
induction, and combinatorial
proofs. The book contains

over 470 exercises,
including 275 with solutions
and over 100 with hints.

There are also Investigate!
activities throughout the
text to support active,
inquiry based learning.

While there are many fine
